EXPERIENCES

Online Bus Ticket Booking System

August 2020 - December 2020

This is an online ticketing system for a bus transportation company. System admin is able to schedule bus rotation in advance and so users can easily find the bus schedule. Users can book the ticket and able to made the payment on website. It has been developed using with PHP, Html, Css, JavaScript, Bootstrap and MySQL.

UCSS Online Library Management System

2019-2022 Academic Year (Third Year)

This system gives us the complete information about the library. We can enter the record of new books and retrieve the details of books available in the library. We can issue the books to the members and maintain their records and can also check how many books are issued and stock available in the library by using this system.
